NEW MARIGOLD CHRYS- ANTHEMUM FLOWERED HYBRIDS

These new Hybrids consist of many new and distinct types of Marigolds, varying in size of bloom from two to four inches in diameter.

The beautiful colors are most fascinating and can best be described as containing all shades of orange and yellow. The plants are about three feet high, supporting masses of flowers on fine stems for cutting. -----Pkt. 20c

CHRYSANTHEMUM FLOW- ERED GOLDEN ORANGE

(Incurved)

This new beautiful variety of Marigold can best be described as a large golden yellow Chrysanthemum -----Pkt. 25c

MARIGOLD CROWN OF GOLD (Gold Medal)

The flowers of the new Colarette Marigold, Crown of Gold, are slightly sweet-scented and the foliage is entirely free of that usual Marigold odour, so objectionable to many. This is the first Marigold in cultivation with entirely odorless foliage. Plants grow to about 2 feet, bloom early, and are very floriferous -----Pkt. 15c

NEW MARIGOLD CHRYSANTHEMUM FLOWERED HYBRIDS

TWO NEW MARIGOLDS—The California Double type of Marigold is similar in habit to Guinea Gold, while the medium sized flowers, although very similar, differ in that the petals are decidedly wavy, almost fringed. They are fully double and average 3 to 3½ inches in diameter, while the plants are about 3 feet in height.

GOLDEN DAWN—Is a lovely soft light golden orange -----Pkt. 25c

MOONBEAM—Is a clear lemon yellow -----Pkt. 25c

For Other Marigolds, See Page 34

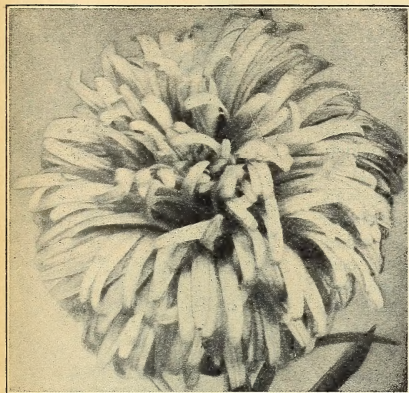

MARIGOLD SUNSET GIANTS

Marigold Sunset Giants have immense flowers, averaging from 5 to 7½ inches across. Instead of the usual Marigold odour the flowers have a definitely sweet fragrance. They are loosely formed, very full centered, with broad, heavy petals gracefully overlapping to make a flower of great depth. The mixture ranges from deep orange through golden orange, deep golden, light yellow, lemon, and primrose. The plants are normally 3½ to 4 feet high, but under favourable conditions grow as much as 7 feet high -----Pkt. 20c

Aster Enchantress

Cosmos Sensation

COSMOS SENSATION PINKIE AND PURITY—The Sensation types of Cosmos is today the favorite for cut flower use. The fact that the flowers are of immense size, 4 to 5 inches or more in diameter, with broad heavy fluted petals which slightly overlap, giving a very full single flower, make it ideal for cut flower use. These large flowers are carried on very long strong stems and are freely produced on plants which reach a height of 3 to 4 feet and have a fairly heavy growth of foliage. The flowers are produced within 8 to 10 weeks from the time seed is sown.

PINKIE—Is a delightful rose pink shade Pkt. 20c

PURITY—It a glistening white Pkt. 20c

MIXED Pkt. 15c

ASTER WILT RESISTANT GIANT COMET ILLUSION

Still another new color in a wilt resistant Aster, Illusion is a soft, pastel shade of apricot pink, especially fine for cutting and most effective when used in combination with some blue flower, such as the Chinese Forget-Me-Not. The plants are upright, about two feet tall and very free blooming. Since the individual stems are short, it is customary to cut the whole plant as a unit when using the flowers for bouquets. The strain is wilt resistant and will flower during mid-August Pkt. 25c

ASTER WILT RESISTANT CREGO ENCHANTRESS

With Enchantress, we are presenting an entirely new color in Asters—a luscious shade of lively salmon rose, distinct from all other colors yet developed. The flowers are large, of good substance, and are produced on free flowering, branching, wilt resistant plants, which bloom in early September Pkt. 25c

ANTIRRHINUM CELESTIAL—A grand new variety of the dwarf type, the plants are compact and have spikes 10-15 inches long, the color is a rich salmon rose, a wonderful bedding variety. Pkt. 25c

TITHONIA SPECIOSA FIREBALL

Dazzling as a ball of fire poised high above other flowers, Fireball is, undoubtedly, the last word in brilliance of color in a fall blooming plant. The flowers are a scarlet orange and measure 4-5 inches in diameter, the plants are very tall often reaching a height of 8-9 feet. In northern sections, the seed should be started inside and the plants set out after danger of frost has passed.

Petunia All Double

NEW PETUNIAS SALMON SUPREME

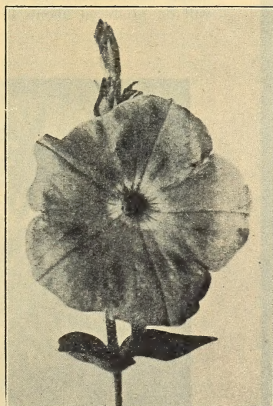

A brand new color in Petunias and one that has been long wanted. The flowers, when first opening, are of a rich coral-salmon, changing as they mature to a glistening soft salmon-pink. They grow 2 inches across. Plants present a very tidy appearance and have a nicely rounded form which is retained throughout the season. They have a uniform height of about 1 ft. and a spread of about 1½ ft. Because of their profuse branching, the plants are unusually floriferous, with all flowers elevated above the light fresh green foliage which harmonizes so beautifully with the soft tone of the flowers. Pkt. 35c

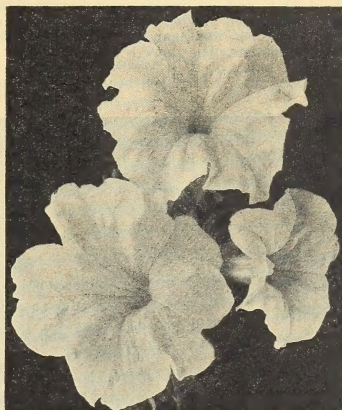

Petunia Salmon Supreme

NEW PETUNIA TOPAZ ROSE

The public has long been asking for a hybrid rose Petunia that will neither fade nor burn under the hottest sun. Topaz Rose is a brilliant addition to the Hybrid group. Petunia Topaz Rose

Petunia Snow Bedder

PETUNIA HYBRIDA SNOW BEDDER

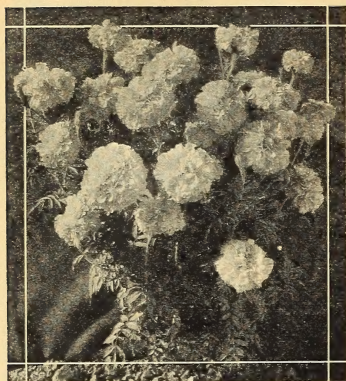

A new break in dwarf white colored Petunias and is much more base-branching than others. In height this does not exceed 10 inches but when well grown fully covers 24 inches of ground. The snow white flowers which measure about 2½ inches across literally cover the whole plant. This strain, instead of growing upright, covers good deal of ground with its snowy flowers. Currie's Sweet Peas

Novelty Varieties for Spring 1938

EARLY FLOWERING SWEET PEAS

Sweet Peas, Shirley Temple

HOW TO GROW THEM—Sweet Peas should be planted as early in spring as the ground can be worked. Rich loam with an abundance of well rotted manure is an ideal soil. A trench about 6 inches deep should be made, sowing the seed thinly in the bottom, and cover with an inch of soil, pressing it down firmly. Gradually fill in the trench as the plants grow, and thin out to 2 to 4 inches apart. When too close they make a weak growth with inferior flowers. Brush or wire netting should be placed in the rows as soon as the plants appear above the ground. During dry weather, water thoroughly and stir the surface soil frequently to prevent evaporation. Keep the flowers cut and never allow seed pods to form, as that at once ends the flowering season.

Late fall planting of Sweet Peas is practical, and is best done just before the ground freezes up, sowing the seed about 3 inches deep, covering the rows with manure or leaves after the ground is frozen.

Currie's Lawn Grass Seed

Produces a Rich, Thick, Velvety Lawn in SIX WEEKS

... A BEAUTIFUL LAWN AND HOW TO SECURE IT ...

Currie's Special Lawn Grass Mixture

For Over 50 Years, This Mixture Has Been Used to Make the Finest Lawns

THOROUGHLY TESTED AND ANALYZED FOR GERMINATION AND PURITY

CURRIE'S LAWN GRASS MIXTURES are the result of years of study and careful observation, and, if our directions are followed in seeding, they never fail to produce quickly a thrifty growth of fine, velvety, rich green grass, continuous in verdure from early spring to winter, and creating a springy, dense, carpet-like turf and permanently beautiful lawn.

Composed of Evergreen Grasses, best suited to our American Climate, only the finest and cleanest grades of seed being used. This splendid mixture is composed of only the finest dwarf-growing evergreen grasses; absolutely free from weed seeds or other impurities.

Price per lb., 40c; 5 lbs., \$1.90; 10 lbs., \$3.75; 20 lbs., \$7.25; 100 lbs., \$30.00.

CURRIE'S PARK MIXTURE

This is composed of quick growing grasses and is used where a lawn is wanted in a hurry, and should be reseeded with our Special Mixture which is composed of the finest of permanent grasses. 1 lb., 25c; 5 lbs., \$1.20.

CURRIE'S FANCY WHITE CLOVER—Extra choice re-cleaned seed for lawns. $\frac{1}{2}$ lb., 35c; 1 lb., 60c; 5 lbs., \$2.85.

CURRIE'S LAKESIDE GRASS MIXTURE

This mixture is specially prepared for country homes where a close, even, velvety turf is not easily secured, owing to the difficulty of watering, etc., so necessary for the maintenance of a perfect lawn. The grasses used are such as endure drought and rough usage to a remarkable degree.

We have made up this mixture in a great measure for the formation of lawns at Lakeside Summer Homes that can only have attention during the summer months, and for this purpose it will be found invaluable. 1 lb., 30c; 5 lbs., \$1.40; 10 lbs., \$2.75; 100 lbs., \$25.00.

GRASS MIXTURE FOR TERRACES

This mixture is made up of fine dwarf growing grasses, with strong creeping and fibrous roots that form a compact growth of turf, resisting drought and exposure remarkably well, and when established, prevents washing. 1 lb., 50c; 5 lbs., \$2.40; 10 lbs., \$4.75; 20 lbs., \$9.25; 100 lbs., \$45.00.

AMOUNT OF SEED REQUIRED

Size of Plot	Square Feet	Quantity
10 x 20	200	1 lb.
20 x 50	1,000	5 lbs.
20 x 100	2,000	10 lbs.
40 x 100	4,000	20 lbs.
200 x 200	40,000	100 to 150 lbs.

For renovating use half these quantities.

Lawn Grass Mixture for Shady Places

To maintain a nice growth of grass under trees and in places where the sunlight only reaches part of the day, was long considered almost hopeless. This can now be overcome in a great measure by our mixture, which is composed of dwarf, compact growing grasses that naturally grow in partial shade and will maintain a close, thick turf throughout the entire season. It frequently happens that the ground under trees becomes impoverished by the roots of the trees, making it almost impossible for grass to thrive unless a liberal top dressing of fertilizer is supplied, or when the ground has soured and covered with moss an application of ground lime will be found beneficial before sowing the seed. $\frac{1}{2}$ lb., 35c; 1 lb., 55c; 3 lbs., \$1.65; 5 lbs., \$2.65; 10 lbs., \$5.25; 20 lbs., \$10.25; 50 lbs., \$23.00; 100 lbs., \$45.00.

CURRIE'S FAIRWAY MIXTURE—Golf courses all over the country are demanding better fairways. We made up this mixture to meet this demand. This makes an excellent turf in a very short time, and is indeed a pleasure to walk over. This will also make a fine lawn, but does not contain any white clover. Sow at the rate of 150 lbs. to the acre. 1 lb., 40c; 10 lbs., \$3.75.

GOLF COURSE MIXTURE—Forms a close turf that bears hard usage and remains green throughout the season. 1 lb., 55c; 5 lbs., \$2.50; 10 lbs., \$4.75; 20 lbs., \$7.75; 50 lbs., \$21.00; 100 lbs., \$40.00.

GOLF MIXTURE FOR PUTTING GREEN—A mixture of dwarf, compact growing fine leaved grasses that withstand constant wear. 1 lb., \$1.00; 5 lbs., \$4.75; 10 lbs., \$9.40; 20 lbs., \$18.50; 100 lbs., \$85.00.

KENTISH WILD WHITE CLOVER

This comes from Southern England and has proved a true perennial of dwarf growth. Well suited to lawns and pastures. Extra fine re-cleaned seed of high purity. 1 oz., 20c; $\frac{1}{4}$ lb., 75c; $\frac{1}{2}$ lb., \$1.30; 1 lb., \$2.50.

KENTUCKY BLUE GRASS—The most valuable and permanent lawn grass. Very slow in getting started and becoming established. Where a quick growth is desired, it is best to use "Currie's Special Lawn Mixture," which has in addition to Kentucky Blue, other excellent lawn grasses that will make a sod the first year, while the Blue Grass is establishing itself. 1 lb., 40c; 5 lbs., \$1.95; 10 lbs., \$3.75.

CURRIE'S ATHLETIC GROUND MIXTURE

No Clover of any kind has been included in this formula, as Clover is liable to make a playing-field slippery. The grasses used are those most capable of making a strong, rapid growth. The roots of the grasses comprising this special mixture will strike deep into the soil, preventing the rapid drying out of the turf in dry weather and yet furnishing a sod that will be permanent and which will stand very hard usage. Areas seeded with this Mixture may be kept closely cut without destroying the stand of grass. We recommend sowing at least 100 pounds of seed per acre. 1 lb., 40c; 10 lbs., \$3.75; 100 lbs., \$35.00.

BENT GRASSES FOR LAWNS AND PUTTING-GREENS

ASTORIA BENT GRASS—This grass has creeping roots and makes a splendid lawn and golf grass. $\frac{1}{4}$ lb., 40c; $\frac{1}{2}$ lb., 75c; 1 lb., \$1.35; 2 lbs., \$2.70; 5 lbs., \$6.50; 10 lbs., \$12.75.

FLORIDA HUMUS

The use of Florida Humus, applied liberally to the surface of the lawn, will help maintain a fine, even sward. An application of one-half inch as a top-dressing once a year is sufficient. Of all the brands of Humus on the market today, we find Florida Humus the most desirable, for it is unusually rich in organic nitrogen, more than 2 per cent and absorbs 5.81 times its own weight of water in five hours. It is a natural home for the soil-bacteria upon which lawn-making and garden-making depend so much. 100-lb. crates, \$3.00; 200-lb. crates, \$5.00; per ton, in 200-lb. crates, \$45.00.

FOR SPRING AND FALL SOWING

Where a field is to be put down to grass for a number of years, a mixture of grasses that are more permanent than Timothy and Clover should be used, such as will produce good crops of hay and pasture for many years without reseeding.

We prepare mixtures of grasses for a wide range of soils and conditions, and there is hardly any land so poor or climate so unfavorable that we cannot furnish a mixture for it that will yield one or more crops of hay every year.

The first cost of seeding with these mixtures is generally more than Timothy and Clover, but the returns fully warrant the extra expense.

Only the best recleaned grass seeds are used by us in these mixtures, and the soil and conditions are fitted, the proper proportions will be used to produce satisfactory results.

Sow 25 lbs. to the acre. Price: 25 lbs., \$7.25; 100 lbs. \$25.00

SEASIDE BENT

SEASIDE BENT GRASS—This grass has creeping roots and makes a splendid lawn and golf grass. $\frac{3}{4}$ lb. 45c; $\frac{1}{2}$ lb., 85c; 1 lb., \$1.55; 2 lbs., \$3.10; 5 lbs., \$7.30; 10 lbs. \$14.20

BENT, CREEPING (*Agrostis Species* or South German. Mixed Bent) — This is undoubtedly one of the finest grasses for putting greens. The distinctive feature of this species is its compact, creeping rooting stems. It is of rapid growth and spreading habit; the stoloniferous roots form a strong, enduring turf which withstands hard usage. Does well on all soils, particularly on light, moist land. Per lb., \$1.30; 10 lbs. \$12.25

ROUGHED STALKED MEADOW (*Poa Trivialis*) — A splendid grass for shady places and valuable for use in golf course turf formation. Sow 100 lbs. per acre. 14 lbs. per bushel. Per lb. 55c

When cured it makes splendid hay. It grows best on moist ground. If sown broadcast, sow 15 to 20 lbs. of seed to the acre, or in drills 12 to 18 inches apart, using 10 to 12 lbs. per acre. Per lb., 15c (by mail, 20c per lb.); 10 lbs., \$1.00; 100 lbs. \$4.00

ARTICHOKE

The Globe Artichoke bears large, round heads with thick, fleshy scales, which are cooked and served like Asparagus. Sow the seed early in March and transplant when warm in rows 4 feet apart and 2 feet in the rows. Cut the tops off in winter and protect with a heavy covering of straw or leaves. The first season will yield only a partial crop. The second year, thin the shoots to three of the best, and these will begin to form heads early in summer.

Another use is to cut back the stems close to the ground early in summer. The young shoots which

start up rapidly may be tied close together, filling in between with soil to exclude the air until they are blanched, and these are used in various forms of cookery or as a salad.

LARGE GREEN GLOBE—Oz., 50c -----Pkt. 10c

ASPARAGUS

Asparagus may be grown in almost any soil, and under nearly all conditions, but succeeds best in a rich, sandy friable loam with good under drainage, and yet not too dry. Avoid planting near trees or tall shrubs, because of the shade and heavy draft on the fertility of the ground. Choose an open space with a southern exposure.

WASHINGTON RUST-PROOF—A new variety, the result of breeding by the U. S. Department of Agriculture to obtain a rust-proof Asparagus. Is nearer to being rust-proof than any other variety. The shoots are large and deep green in color. Oz., 15c; ¼ lb., 30c; 1 lb., 85c -----Pkt. 10c

Sow the seed in May and harvest in August. $\frac{1}{2}$ oz., 25c; oz., 40c; 4 ozs., \$1.15; $\frac{1}{2}$ lb., \$1.80; lb., \$3.25 --Pkt. 10c

SWISS CHARD or SPINACH BEET

Swiss Chard is a beet grown for its leaves. The mid-rib when boiled makes delicious greens, or the leaves may be boiled and served as spinach. If given a little protection, it will survive the winter and make excellent greens early in the spring. One ounce will sow 100 feet of drill.

BEANS

STRINGLESS WAX OR YELLOW PODDED VARIETIES

CULTURE—Begin sowing dwarf or bush varieties the first week in May, if the ground is in fit condition. For successive crops sowings may be made every two or three weeks until the 15th of July. Mature in 45 to 65 days. Sow thinly in drills 2 or 3 inches deep and from 18 inches to 2 feet apart. If the soil is rather poor, the former depth will suffice. If rich, the latter. Never cultivate beans while the foliage is wet or covered with dew, because the bean-spot or anthracnose will spread very rapidly if carried on the clothing or hoe, with detrimental effect to the crop. Beans should be picked daily in order to have them tender and stringless.
(120 lbs. to the acre in drills.)

CURRIE'S RUST-PROOF WAX—The Earliest and Most Prolific of All Wax Beans. The Best Wax Bean for the Market Gardener. Tender and Absolutely Stringless. Proof Against Rust. For many years a standard sort of nation-wide popularity, and still unsurpassed by none. Not only is it rust-proof, but it possesses the most excellent quality of being exceedingly crisp and tender, with no approach whatever to stringiness and of a most delicious flavor. Pods uniform in size, long, straight, flattish oval. $\frac{1}{2}$ lb., 25c; 1 lb., 45c; 2 lbs., 75c; 5 lbs., \$1.40-----Pkt. 10c

UNRIVALED WAX—An immensely productive, first early sort. Pods 5 to 5 $\frac{1}{2}$ inches long, rather narrow, either perfectly straight or slightly curved. Plants large, vigorous and nearly disease-resistant. $\frac{1}{2}$ lb., 20c; 1 lb., 35c; 2 lbs., 60c; (prepaid); 5 lbs., \$1.40-----Pkt. 10c

ROUND POD KIDNEY WAX—Pods brittle, absolutely stringless and rustless, lemon-yellow. 6 to 7 inches in length, fleshy and superior in quality, plants 18 to 20 inches high; seed nearly pure white, having but a single brownish mark at the eye. $\frac{1}{2}$ lb., 25c; 1 lb., 40c; 2 lbs., 70c; 5 lbs., \$1.25-----Pkt. 10c

CULTURE—For the successful cultivation of this root the soil should be light (sandy loam is best, enriched the previous year with manure) and deeply tilled. For an early crop the seed should be sown as early as the ground can be properly worked. For later crops it may be sown any time until about the middle of June. Be careful to compress the soil over the seed after sowing. Sow in rows about 15 inches apart, or for field culture $1\frac{1}{2}$ to 2 feet apart, covering

the seed about $\frac{1}{2}$ to 1 inch deep. Keep down weeds.

In our young plants as soon as they have been raised to the height of 10 to 12 inches, they should be thinned, leaving them about 4 inches apart. 1 oz. 100 feet of drill; 3 to 4 lbs. per acre in drills.

Cauliflower

Extra Early Snowball Cauliflower

CURRIE'S DANISH MARKET CAULIFLOWER

"DRY WEATHER"—Extra Selected

Comes in about three weeks later than our Selected Early Snowball. Heads larger and firmer.

Our stock of this grand cauliflower cannot be surpassed. For packers and pickle growers it has no equal, yielding, as it does, immense, solid heads, many of which weigh over 10 pounds each of solid flower.

Every plant produces a head, many of them so large that three fill a bushel basket and all perfectly solid. As the name "Dry Weather" implies, this variety possesses to a marked degree the ability to resist without deterioration extremely droughty conditions such as have been experienced during recent seasons. Because of this constitutional hardness many growers, especially those in the drier, hotter sections, pin their faith to this fine sort as against all other varieties. $\frac{1}{4}$ oz., 90c; $\frac{1}{2}$ oz., \$1.50; 1 oz., \$2.50; 2 oz., \$4.50; $\frac{1}{4}$ lb., \$8.00 ----- Pkt. 15c

EXTRA EARLY SNOWBALL or DANISH PERFECTION

The leaves, very closely enfolding the head, give it a particularly attractive appearance when displayed for sale, as the inner leaves almost cover the snow-white flower, the necessity of early tying up as in the case of other early sorts is largely avoided. It is the earliest strain of its type and recommended for extra early marketing. $\frac{1}{4}$ oz., \$1.00; $\frac{1}{2}$ oz., \$1.75; 1 oz., \$3.00; 2 oz., \$4.75; $\frac{1}{4}$ lb., \$9.00; 1 lb., \$30.00 ----- Pkt. 25c

CULTURE—The seed for early planting should be sown in February or March in a hotbed, transplanting the plants when large enough into another or the same frame, and gradually hardening them off, preparatory to planting them out as early as the ground is in a fit condition. For late planting the seed should be sown in May in a cold frame or open ground in soil that is well pulverized. Any good garden soil made rich by manuring, will suit. When the heads begin to form the leaves should be tied together to prevent the flowers becoming sunburnt and tough. In order to have them tender and of good flavor they must be gathered before they become too large. 1 oz. for about 3,000 plants. Set in rows $2\frac{1}{2}$ feet apart and $1\frac{1}{2}$ feet in the row. 3 to 4 oz. to the acre.

Our Cauliflower Seed is grown in Denmark and is the best that can be procured.

EARLY SNOWBALL Extra Selected

For years, this has been the best early sort for the market gardener and trucker's use, and the standard variety for the amateur. Sure to head and remain pure and white when others are discolored and unsalable. The heads measure 8 to 10 inches across when grown in good soil.

The seed we offer is of very superior quality and is grown for us by one of the most reliable cauliflower growers in Europe, and the great care taken to keep it up to the highest standard is manifested in the superiority of the crops grown from it every year. It is of dwarf,

compact habit, heads very large and pure white. $\frac{1}{4}$ oz., 70c; $\frac{1}{2}$ oz., \$1.20; 1 oz., \$2.10; 2 oz., \$3.75; $\frac{1}{4}$ lb., \$7.50; 1 lb., \$25.00; Pkt. 15c

Celery

One ounce will furnish 3,000 to 5,000 plants

Celery is a crop that requires a very long season. If an early crop is to be grown from seeds, the latter must be started indoors in boxes about the last of February, the plants being set in the ground, 6 inches apart, in May. The crop should be ready in August. Celery for winter may be grown from seeds started in the open ground in late April, but it is advisable to have a seed bed and to transplant the seedlings to the open field when large enough. It is well to cut off the lower half of the roots at transplanting time, and firming the soil around the plants is very important.

SUPERPLUME (Special Mention in the All American Trials, 1937)—A new celery, very much like Golden Plume, but has thicker, longer meatier stems with better quality. It is earlier and stands longer without becoming pithy. It branches very easily to a clear deep cream. It is also an excellent storage variety. ½ oz., \$1.50; 1 oz., \$2.50; ¼ lb., \$7.00 -----Pkt. 15c

GOLDEN DETROIT — Plants very compact and full-hearted. Stems broad, thick, and ordinarily 7 to 8 inches long; blanch easily to a rich creamy-yellow; free from strings. ½ oz., 60c; 1 oz., \$1.00; ¼ lb., \$3.25 -----Pkt. 25c

GOLDEN PHENOMENAL—The general characteristics are those of Golden Plume, but it is decidedly taller and the stalks are much longer to the joint. Free from any strings, fine flavor, and excellent quality. ½ oz., 50c; 1 oz., 90c; ¼ lb., \$3.00 -----Pkt. 20c

In this latitude it is advisable to start the seed in paper pots indoors, or between two pieces of inverted turf, to insure an early crop.

To keep off insects use Pyrox for the striped beetle and a nicotine spray for aphids. To prevent blight, after the plants have 4 or 6 leaves use Bordeaux Mixture, to which may be added arsenate of lead for eating insects.

ONIONS

CULTURE—The Onion is most successfully grown in a deep, rich loamy soil, and, unlike most vegetables, does best when cultivated in the same ground for a succession of years. Manure the ground well in the fall, and turn up in ridges, during the winter, and as early as it will work in the spring rake or harrow thoroughly so as to get the soil fine and level. Sow thinly in drills half an inch deep, rows 12 inches apart, and cover with fine soil, pressing it down. Keep the ground free from weeds and thin out the young plants so they may stand 3 or 4 inches apart. The small onions pulled may be eaten green and the balance allowed to mature. 1 oz. to 100 feet of drill; 4 to 5 lbs. to the acre.

Garden Peas

Two pounds to 100 feet of drill; 120 lbs. to the acre in drills.

Sow the Extra Early round seeded varieties as early in the spring as the ground can be worked, and the wrinkled sorts later, when the ground is warmer, as they rot readily in cold, wet soil early in the season. Sowings should be made at intervals until the end of May. Discontinue sowing until August, as peas suffer very much during the hot summer months, after which the early kinds may be planted with good results.

Varieties marked * are wrinkled.

The price of peas up to 2 lbs. includes delivery by parcel post or express; 5-lb. prices and over do not include transportation. See zone rates.

Currie's Select Tomato Seed

CULTURE—Sow the seed in a hotbed the first week in March, in drills half an inch deep. When the plants are about 2 inches high, transplant into another hotbed or into small pots, one in each pot; in that way the plants are strengthened and branch out better. Set the plants out about the first of June, about 3 feet apart, for early crop, mixing a shovelful of well-rotted manure in each hill. For late crops, or where the soil is heavy,

plant 4 feet apart. Water freely when transplanting, setting the plant deep, and protect from the sun for a few days until the plants are fairly started. A few plants may be raised by sowing seed in a pot or a box in the house. Where only a few plants are grown, the vines may be trained to a single stem, removing all suckers, thus inducing earliness and superiority of fruit. 1 oz. to 1,500 plants, ¼ lb. for transplanting on an acre.

TESTIMONIAL

Permit me to add that I have used your seeds for many years (I frequently buy them directly from your store when I am in Milwaukee; sometimes I order by mail) and I have found them absolutely satisfactory. I wanted you to know this. We have a country place of two acres all of which is landscaped. There are many and very large beds. To date, I have had no disappointment in the annuals and perennials obtained from Currie's seeds.

Most sincerely yours,
MRS. E. F. STONE, Wis.

MANGEL-WURZEL AND SUGAR BEET

Sow early in spring in deep, rich soil, in rows 18 to 24 inches apart.

5 lbs. to the acre in drills 2 feet apart. Thin out to 9 inches apart in the row.

For feeding stock, few crops equal Mangel-Wurzel and Sugar Beets. Canadian farmers appear to appreciate this more than we do. The roots are stored in barns or pits before hard frost sets in and fed during the winter months.

The Giant Half-Sugar Beets are much more productive than the Sugar Beets and fully equal to the best of them in feeding qualities. A large portion of the root being above ground renders them easy to handle. Every stockman should give them a trial.

Mangel-Wurzel are also very nutritious and yield very heavy crops, often exceeding 1,500 bushels to the acre. It is not unusual to grow roots weighing upward of 20 lbs. each on fairly rich soil.

Prepare the ground thoroughly, using a liberal supply of barnyard manure, previous to sowing the seed.

IMPROVED MAMMOTH LONG RED—The largest and heaviest cropper of all the Mangels. The roots are often more than 2 feet long, and a half to two-thirds above ground, so that they are easily harvested. 1 oz., 10c; ¼ lb., 25c; 1 lb., 60c; by express at buyer's expense, 5 lbs., \$2.50 ----- Pkt. 5c

GOLDEN TANKARD—Grows largely above ground. Roots are heavy and half long; color yellow. 1 oz., 10c; ¼ lb., 25c; 1 lb., 60c; by express at buyer's expense, 5 lbs., \$2.50 ----- Pkt. 5c

GIANT HALF SUGAR BEET**For Feeding Stock**

These combine the large size of the Mangels with the excellent feeding qualities of the Sugar Beets. The roots grow about two-thirds above ground, making them easily harvested.

GIANT HALF-SUGAR ROSE—Grows to a large size. 1 oz., 10c; ¼ lb., 25c; 1 lb., 55c; by express at buyer's expense, 5 lbs., \$2.20 ----- Pkt. 5c

JERSEY'S DAINTY—C.—This straight cactus is a beauty. The color, white tinged lavender. Plant, 75c.

WHY GROW DAHLIAS FROM PLANTS?

The practice of making green plants is not new. It is a method which has enabled growers to get choice new varieties at half the tuber price.

Every year more and more growers are showing a preference for dahlia plants over tubers. This is due principally to the fact that plants give greater assurance of success than do tubers. Careful study through the years has resulted in definite conclusions which prove this fact.

JESSICA DRAGONETTE—S.C.—We have classed this wonderful dahlia as a semi-cactus, but it borders on the informal. The color is blending of peach, apricot, and mauve. Currie's Peonies

EXQUISITE PEONIES

Modern Peonies are rapidly becoming the leading hardy flowering plant. They can take the place of low-growing common shrubs because their foliage remains attractive all summer, and besides, they produce every spring an abundance of glorious, fragrant blossoms.

Peonies are perfectly hardy and do well in any well-drained garden soil. They respond to care, of course, and an application of well-decayed manure every spring or fall is commendable. Plant so that the eyes are covered with not more than 2 inches of soil.

Peonies are very attractive planted in beds along the drive in the perennial border, against a background of evergreens. Lilies do very well planted among Peonies.

THE PEONY RATING—Numbers in front of varieties refer to their rating by the members of the American Peony Society (9.5 or more, almost perfect; 9.0, very fine; 8.5, fine; 8.0, very good; 7.5 good).

TREE PEONIES

Including the Newest in Double Yellows

Generally speaking the Tree Peony differs from the herbaceous Peony in that the stems of the Tree Peony are woody and the plant will attain a height of over 5 feet.

Tree Peonies in general bloom earlier than the Chinese Peonies and they are very free-flowering. Amongst the Tree Peonies we also find colors unknown in the Chinese Classes.

We have studied and propagated Tree Peonies for a good many years and the collection listed on these pages represents what we have selected as the finest assortment available today. We like to draw your attention especially to the yellow varieties which still belong to the rarest of all plants.

SIZE OF PLANTS AND TIME OF SHIPPING—At prices quoted we supply strong two to three-year-old plants. We carry most of our tree peonies in 5-in. pots so that they can be shipped at any time. Tree Peonies bloom when very young. Quite often we have flowers in one-year plants. It must be considered that tree peonies are grafted and that a two- or three-year tree peony cannot be compared in size with a two- or three-year clump of the Chinese Peony.

GARDEX PULL HOE

With an easy pull, the sharp V-Shaped Blade bites into the ground. As you walk along, the soil flows over and through the side guards which also protect plants when doing quick, close work. Thus it weeds and cultivates in one operation, leaving soil finely mulched just where you want it, without exposing moist soil to sun. No weeds can escape and it gets most of them out by the roots. Handle fits socket perfectly—a firm tamp and it's in to stay—no bolts, screws or wedges to bother with. Made of Special High Carbon Steel for lasting service. Polished Blade.

ADCO WEED-KILLER

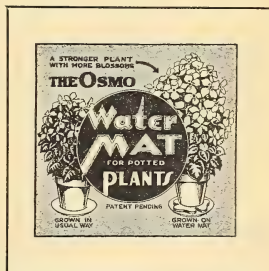

ADCO WEED KILLER is simple and easy to use. For small plots the 3-lb. sifter cans may be all you need, but generally it is better and cheaper to buy the 25-lb. bags. Shake the powder over the lawn in a thin film, as if you were sowing grass seed. Then watch. In a few hours the weeds will wither and die. You may think the grass is sharing the same fate, but it isn't. At the end of 24 hours give the lawn a thorough soaking. The weeds will be gone and in a few days more the grass will be thicker, richer, darker in color, more luxuriant than you have ever seen it.

JACOBSEN POWER MOWERS

THE "SIMPLEX" 20-INCH CUTTING WIDTH

The Jacobson "Simplex" meets the demand for a small, quality-built power mower at a low price. It is ideal for suburban homes, small parks, public grounds, cemeteries and estates—or in circumstances where investment must be kept at a minimum and the amount of mowing does not demand the larger, heavy-duty Jacobson models.

The "Simplex" is not just a hand mowed with adapted power—but like all Jacobson models, it is built as a power mower from the ground up, and designed for easy, simple, efficient mowing. Despite its low cost it embodies such Jacobson features as chrome-nickel steel reel mounted in Timken ad-

justable roller bearings, lipped-blade bed knife of molybdenum steel, safety clutch in the reel drive

and bevel gear auto-type differential. It has the strength and stamina to insure long, repair-free service. Plenty of power for steep grades.

Its light weight, short turning radius and compactness permit its speedy, handy operation among trees, on hillside and terraces and other hard-to-get-at places. And it is so simple in construction that even a boy can operate it.

The operating cost of the "Simplex" is so low as to be almost negligible. Even if your lawn runs into acreage, the power cost of giving it a weekly cutting will average not over a dollar a month.

NIEREMBERGIA HIPPOMANICA (*Dwarf Cup Flower*)

Of all the hundreds of new flower introductions during the course of the past few years, none has caused more comment than this little Dwarf Cup Flower. It starts flowering when the plants are only 2 inches tall, that is about 15 weeks after the seed is sown and keeps right on until the heavy frosts of late fall. The plants form a cushion of light green foliage and grow not over 5-6 inches and with a spread of only 8-10 inches.

The flowers are a lovely lavender blue shade with a touch of yellow in the center and there are literally dozens of flowers in bloom at a time through out the summer. -----Pkt. 25c
